BALAYAN K. V.

CHECKLIST OF THE FLORA OF
MOUNTAIN KARABAKH
(VASCULAR PLANTS)

The Checklist contains data on life forms, area types, altitudinal zonation, useful properties of 2026 species (preliminary list) of vascular plants belonging to 653 genera and 127 families. In the studied flora, perennial herbaceous plants make up the majority – 1223 species (60.3%). Relatively well represented are annual – 493 (24.3%) and biennial 86 (4.3%) species. Dendroflora MK consists of 225 species (11.1%). The greatest variety of species is characteristic of medium mountain belt.

Mountain Karabakh, flora, area, vascular plants

Балаян К. В. Конспект флоры Нагорного Карабаха (сосудистые растения). В конспекте приведены данные о жизненных формах, типах ареала, высотной поясности, полезных свойствах 2026 видов (предварительный список) сосудистых растений, относящихся к 653 родам и 127 семействам. В исследованной флоре многолетние травянистые растения составляют большинство – 1223 вида (60,3 %). Относительно хорошо представлены также однолетние – 493 (24,3 %) и двулетние 86 (4,3 %) виды. Дендрофлора НК состоит из 225 видов (11,1 %). Наибольшее видовое многообразие характерно для среднего горного пояса.

Нагорный Карабах, флора, ареал, сосудистые растения

Բալայան Կ. Վ. Լեռնային Ղարաբաղի ֆլորայի կոնսպեկտ (անոթավոր բույսեր): Կոնսպեկտում ներկայացված են 127 ընտանիքների, 653 ցեղերի պատկանող 2026 տեսակների (նախնական ցուցակ) կենսական ձևերի, արեալի տիպերի, բարձունքային գոտիականության, օգտակար հատկանիշների մասին տվյալները: Ուսումնասիրված ֆլորայում գերակշռում են բազմամյա խոտաբույսերը՝ 1223 տեսակ (60,3 %): Համեմատաբար լավ են ներկայացված նաև միամյա՝

493 (24,3 %) և երկամյա՝ 86 (4,3 %) տեսակները: ԼՂ դենդրոֆլորան ընդգրկում է 225 տեսակ, որը կազմում է ֆլորայի 11,1 %-ը: Ուսումնասիրված տարածքի ֆլորայում առավել բազմազան է միջին լեռնային գոտին:

Լեռնային Ղարաբաղ, ֆլորա, արեալ, անոթավոր բույսեր

In spite of rather small territory Mountain Karabakh (MK) strikes the eye with a great variety of plant species and communities. With a long history of the botanical investigations in the Caucasus the flora of Mountain Karabakh wasn't studied in detail, which determines the urgency of this work. This work is a generalization of the previously published "Chorological analysis of the flora of Artsakh" (Balayan, 2018). Based on the results of the analysis², the heterogeneity of the studied flora was revealed – its relationship with both the flora of the Ancient Mediterranean and the flora of the Boreal sub-kingdom. Having traced the distribution of the flora species of Artsakh from north to south, with a decrease in the altitude of the landscape above sea level and an increase in the aridity of the climate, it can be concluded that the border between the Boreal and the Ancient Mediterranean sub-kingdoms passes on the territory of this region.

MK flora includes 2026 species of vascular → plants, belonging to 653 genera and 127 families (Balayan, 2014, 2018). 3 new species for MK flora: *Smilax excelsa* L., *Crataegus zangezura* Pojark., *Helminthotheca echioides* (L.) Holub were discovered. The data on distribution, types of area, life forms, altitudinal belts and useful properties of the species are given in the work.

In the investigated flora perennial herbaceous

1 The name Artsakh is the historical name of Nagorno-Karabakh.

2 The analysis of the flora of Artsakh is based on the data of the Flora of the USSR (1934-1960), Flora of the Caucasus (1939-1967), Flora of Armenia (1954-2009), Flora of Azerbaijan (1950-1961). Caucasian Flora Conspectus (2003-2012) (cited as CFC) and S. K. Czerepanov (1995). To determine the geoelements of the studied flora, the classification of A. A. Grossheim (1936), the floristic zoning of A. L. Takhtajan (1978), A. A. Saghatlyan (1997) and the method of N. N. Portenier (2000) were used.

plants form the majority – 1223 species (60,3%), comparatively well are represented also annuals (493 species, 24,3%), more less–biennials (86 species, 4,3%). Dendroflora of MK comprises 225 (11,1 %) species.

The greatest variety of species is characteristic of medium mountain belt. Majority of the species are growing in more than one altitudinal belts.

The comparative analysis of the floras of Mountain Karabakh and Meghri and Zangezur floristic regions of Armenia shows that the flora of the northern regions of MK is closer to flora of Zangezur while the flora of southern part stands closer to Meghri.

There are 7 groups of the useful plants represented in the flora of Mountain Karabakh: medicinal – 549 species (27.1%), decorative – 454 (22,4%), edible – 182 (9%), dye plants – 28 (1,4%), honey plants – 95 (4,7%), fodder plants – 129 (6,4%) and technical ones 18 (0,9 %).

Edible and medicinal plants: *Eremurus spectabilis* M. Bieb., *Asparagus officinalis* L., *A. verticillatus* L., *Silybum marianum* (L.) Gaertn., *Stellaria media* (L.) Cyr., *S. neglecta* Weihe, *Polygonatum orientale* Desf., *Cornus mas* L., *Malva neglecta* Wallr., *M. sylvestris* L., *Portulaca oleracea* L., *Fragaria vesca* L., *Capparis spinosa* L., *Prunus divaricata* Led., *P. spinosa* L., *Pyrus caucasica* Fed., *P. salicifolia* Pall., *Rubus caesius* L., *R. buschii* (Rozan.) A. Grossh., *R. caucasicus* Focke., *Urtica urens* L., *U. dioica* L., *Capsella bursa-pastoris* (L.) Medic, *Anthriscus caucalis* M. Bieb., *A. cerefolium* (L.) Hoffm., *A. nemorosa* (M. Bieb.) Spreng., *Hippomarathrum microcarpum* (M. Bieb.) V. Petrov,

Conium maculatum L., *Foeniculum vulgare* Mill. etc.

Medicinal and spicy plants: *Melissa officinalis* L., *Hypericum perforatum* L., *Origanum vulgare* L., *Saturea hortensis* L., *Thymus transcaucasicus* Ronn., *Zizyphora serpyllacea* M. Bieb., *Plantago lanceolata* L., *P. major* L., *Nasturtium officinale* (L.) R. Br., *Cephalaria gigantea* (Ledeb.) Bobr., *Trifolium pratense* L. etc.

Decorative and medicinal plants: *Inula helenium* L., *Tussilago farfara* L., *Dianthus orientalis* Adams, *Gypsophila elegans* Bieb., *Silene chlorifolia* Smith., *Alcea flavovirens* (Boiss. et Buhse) Iljin, *Anacamptis pyramidalis* (L.) Rich., *Orchis mascula* L., *Papaver orientale* L., *Sanguisorba officinalis* L., *Platanus orientalis* L., *Lysimachia verticillaris* Spreng., *Lonicera caprifolium* L., *Hesperis matronalis* L., *Polypodium vulgare* L., *Epilobium hirsutum* L., *Jasminum fruticans* L., *Polygonum alpestre* C. A. Mey., *Calendula persica* C. A. Mey. etc.

28 representatives of the MK flora are dye plants, including: *Cotinus coggygria* Scop., *Anthemis tinctoria* L., *Eupatorium cannabinum* L., *Solidago virgaurea* L., *Punica granatum* L., *Iris pseudacorus* L., *Glycyrrhiza glabra* L., *Genista transcaucasica* Schischk., *Rubia tinctorum* L. etc.

Species with valuable wood are: *Zelkova carpinifolia* (Pall.) K. Koch, *Ulmus glabra* Huds., *U. foliacea* Gilib., *U. elliptica* K. Koch, *Juglans regia* L., *Quercus macranthera* Fisch. et C. A. Mey., *Q. iberica* Steven, *Fagus orientalis* Lipsky, *Castanea sativa* Mill., *Corylus colurna* L., *Carpinus orientalis* Mill., *C. caucasica* Grossh., *Taxus baccata* L., *Acer trautvetteri* Medw. etc.

Table

FLORA OF MOUNTAIN KARABAKH / ARTSAKH/, VASCULAR PIANTS
